The Right and Wrong Way to Talk To An Impatient Boss

Most impatient seeming bosses aren't suffering from some chronic character flaw. More often than not, **they just have a particular communication style that likes things at a high level, without too much detail, and a focus on cutting-to-the-chase.** And for the record, that describes a lot of bosses. C-level executives, and especially CEOs, are often wired this way.

But if you communicate the wrong way to them, things will get uncomfortable very quickly. And it can do real damage to your working relationship.
